As the Founder and President of **Baroda Science Society**, I started this initiative to make STEM education more accessible and engaging for students from government schools across Gujarat. What began as a small outreach project has now grown into a large-scale movement—reaching over **500 students** through interactive science demonstrations, hands-on experiments, and discussions that show how science connects to everyday life.

Our team has conducted sessions in multiple schools across the state, including **Gavasad, Kural, and Masad**, where students performed simple yet eye-opening experiments—like inflating balloons with baking soda and vinegar—to understand the fundamentals of chemical reactions. Each visit aims to spark curiosity, build confidence, and encourage more students to pursue STEM fields in high school and beyond.

Beyond classroom engagement, I'm working to establish **fully equipped science laboratories** in under-resourced schools by partnering with companies through their **CSR (Corporate Social Responsibility) budgets**. The goal is not just to teach science, but to **build long-term infrastructure and opportunities** that empower young innovators to explore, experiment, and discover.
